

Activity: Practice!

The most difficult part was keeping track of all the handlebars and understanding the concept of handlesbars at first. The easiest way I learned the use of it was doing the activity and along with the assignment. This allowed me to see how it worked and tinkering around with handlebars helped me with my understanding.

Another part that I had difficulty was doing the POST request from the examples. Using the advanced Rest client was difficult at first since the videos didn't show how to use it. I looked through piazza and didn't find anything, but on stack overflow

“<https://stackoverflow.com/questions/14551194/how-are-parameters-sent-in-an-http-post-request>”

that link helped me the most. Then I tried it with the example from the activity to check my understanding. Then I made sure I knew how to work by implementing it in the project. Once I tried using the javascript method

“<http://flip1.engr.oregonstate.edu:8116/?parameter1=value1¶meter3=value3¶meter2=value2>”

then I tried a post request with the Yet Another REST Client (since Advanced REST Client wouldn't connect for some reason) and it worked on there.
